**Abstract** - Capturing the students' attention is the biggest challenge to a teacher. Today's educational system is rapidly changing its objectives. Every year, the curriculum and objectives of the course is continuously changing. To handle a class, a teachers need to be updated with emerging technology and new trend of teaching. A classroom is a podium of reflection where of teaching and learning takes place . For a effective classroom teaching and learning there is a need to have motivators ,effectives responders and innovative teaching methodology. For this to happen teacher is expected to have and overall idea new innovation teaching techniques and useful technology to be implemented .It is for sure that the integration of technology has given a number of benefits to the learner but on the other hand it missed the concept of teacher - student relationship , social skills and life skills which happens to be the core of any of the curriculum The environment of teaching should be student – centered, giving equal importance to face to face teaching also.

**Keywords** – Curriculum, technology, Innovative teaching, social skills, life skills and techniques.

## I. INTRODUCTION

In order to achieve a successful and meaningful educational environment, the very objective should be on quality education, teaching methods and use of technology. Teaching and learning, technology offer promising and innovative ways to create more interesting and enjoyable academic environments .Blended teaching and taking care of tools of technology would contributed in achieving this goal.. Further it can be decided by the teacher how much one should go with verbal instructions and accommodation of the technology into the classroom By adopting the two key principles, the Educational sector can emerge successful in creating a effective learning environment

### 1. Understanding the classroom

Every teacher initiates a good teaching process in the classroom. Teacher need to have a clear idea on what and how he/she is going to teacher the students .Teaching needs to have an estimated on the learners needs, their behavior and classroom environment . Teacher is expected to a part of continuous professional development where he/she continuously can reflect on the teaching by documenting experience and participating in professional projects . These activities can bind the Educator to understand the classroom and students

### 2. Practicing Innovative teaching with specific tool of technology

Technology is the fundamental essence of teaching that showed an significant improvement in learning process of a student. Technology also has the power to transform teaching by ushering in a new models connected to teaching.

Following tools can be practised for acclerating productive education learning.

#### A) TED-Ed project

This is an educational initiative where useful experiences and video lesson are shared . The speakers of the platform unknowing captures the attention of the students to retain their receiving skills till they understand the beneath meaning of the lectures. Many of the Educational Institutes made it compulsory and convenient for the student to listen and watch these short videos for inspiration and for academic knowledge. The open source of TED talks not only aims online instructions but also delivers stylized lectures with a reliable and quality information.

#### B) Online handouts / worksheets

Another way of ensuring students' exploring innovation and practical learning is through online handouts and worksheets. The templates can be designed in an effective way to make sure students explore new topics and practice new skills on a daily basis by answering worksheets and using online handouts . This technique can be used while teaching

vocabulary , grammar, Interview skills and Employability skills

### **C) E portfolios**

Encouraging the students to create their own portfolios which would be an authentication of what they have learnt so far. On the other side this creation extends a scope for the teachers to assess the students on their understand.

The assessment of the student's learning would become easy through E- portfolios . E Portfolio is a platform where a student can document their understanding and feedback on the content received through digital or online process .

### **D) Creative Teaching**

Creativity is the key essence to stimulate the classroom environment .This would give a positive and encouragement to the students to get connected to the teaching.- Running Dictionary , using the technique of question wall , Warmers , Brainstorming can be listed out in this category for learning. By Introducing these elements into classroom teaching the students would get chance to explore their ideas and contribution in the receiving the content.

### **E) Incorporate audio-visual materials in your sessions.**

In general, these days text books are provided with CDs which includes the content that needed to be taught. A teacher can utilize this option more realistically by asking the students to prepare a power point presentation or group discussion on content delivered in the CD. This factor would give an opening to the student to participate in team work and accommodating themselves with appropriate documentation.

### **F) Creating a Blog**

This is another way to provide a dimension to the learning. A blog is a technique where one express the thoughts and to interact with other people on common interest

### **G) Introducing massive open online course**

Designing a common online course consideration the receiving levels of the students . It is a forum for interaction, videos, lectures, depicting real life situations for unlimited participants through open assess.. The students will give exposed to the professional and practical skills.

and challenging task. To achieve the desired result the teachers need to invest , time, quality teaching and update themselves with new approaches and methods of teaching.
